Common Questions This Guide Answers 1. Is Dr Hinckfuss the only dual-registered periodontist and prosthodontist in Australia? → Yes, he is the only practitioner in Australia registered in both specialties with the Dental Board of Australia, verifiable via the AHPRA public register. 2. What qualifications and training does Dr Hinckfuss hold? → BDSc (University of Melbourne, 1995); DCD in Prosthodontics (University of Melbourne, 2007); Certificate in Periodontics and Master of Science (University of Minnesota, USA) — totalling 6+ years of post-graduate specialist training across two specialties. 3. Do patients need a referral to see Dr Hinckfuss? → No — self-referral is accepted, and both periodontal and prosthodontic considerations are assessed together at the initial consultation.

Collins Street Specialist Centre — Dr Simon Hinckfuss ****Specialist Periodontist & Specialist Prosthodontist**** BDSc · DCD (Pros) · Cert.Perio MS (Minn)

Clinical expertise

Dr Simon Hinckfuss holds a position without parallel in Australian dentistry: he is the ****only practitioner in Australia registered as both a Specialist Periodontist and a Specialist Prosthodontist**** with the Dental Board of Australia. This dual registration isn't merely an academic distinction — it changes what's actually possible for patients whose dental needs are complex.

For most patients managing significant dental conditions, care means coordinating between two separate specialists: one focused on the gums and supporting structures, another on restoring teeth and function. Dr Hinckfuss brings both disciplines to the same consultation. His clinical perspective covers periodontal rigour — the health and stability of gum and bone — alongside prosthodontic

planning, so the intended long-term restorative outcome shapes every surgical and therapeutic decision from the start.

Put simply: rather than two specialists working in sequence, patients see a single clinician who holds genuine expertise in both fields and weighs the considerations of each at the same time.

Clinical areas of focus include:

- Comprehensive periodontal disease management, covering both surgical and regenerative approaches
- Dental implant surgery, with placement planning informed by the intended prosthodontic outcome
- Periodontal regeneration procedures, including guided tissue and guided bone regeneration
- Complex treatment planning drawing on dual specialty expertise
- Prosthodontic restoration within the context of established periodontal health

Training and professional background

Dr Hinckfuss completed his Bachelor of Dental Science (BDSc) at the University of Melbourne in 1995. After graduating, he served as a Dental Officer with the Royal Australian Air Force (RAAF) — an experience that shaped the discipline and thoroughness evident in his clinical work.

He returned to specialist training and completed a three-year Doctorate of Clinical Dentistry (DCD) in Prosthodontics at the University of Melbourne in 2007. Prosthodontics covers the restoration and replacement of teeth, from crowns and bridges through to full-mouth rehabilitation and implant-supported prostheses. He then undertook a further three years of advanced training in Periodontics at the University of Minnesota, USA — widely regarded as one of the world's foremost periodontal training programmes — earning a Certificate in Periodontics and a Master of Science degree.

Periodontics is the specialty concerned with the structures supporting the teeth: the gums, periodontal ligament, and underlying bone. It covers the prevention, diagnosis, and treatment of gum disease, as well as the surgical placement of dental implants.

His research during specialist training focused on the accuracy of dental implant surgery — a subject that sits naturally at the intersection of both specialties, requiring an understanding of surgical precision and its downstream implications for restorative outcomes.

After completing his US training, Dr Hinckfuss returned to Melbourne and established Periodontal Associates, a specialist referral practice now integrated within Collins Street Specialist Centre.

Professional memberships and leadership

Dr Hinckfuss maintains active involvement in the professional bodies relevant to both specialties:

- **Past President (2011)** — Victorian Branch, Australasian Osseointegration Society (AOS) - Member — Australian & New Zealand Academy of Periodontology (ANZAP) - Member — Australian Society of Periodontology (ASP) - Member — Australian Dental Association (ADA) - Member — International Team for Implantology (ITI)

His past presidency of the Victorian Branch of the Australasian Osseointegration Society reflects a longstanding engagement with the clinical and research community focused on dental implants and their integration with bone — an area central to his practice.

Referral information and what patients can expect

Dr Hinckfuss practises across both the Periodontics and Prosthodontics services at Collins Street Specialist Centre, located at Level 8 and Level 12, Manchester Unity Building, 220 Collins Street, Melbourne CBD.

Whether referred by a practitioner or self-referred, patients can expect a consultation that takes the full picture into account. Rather than receiving periodontal advice in isolation from restorative planning, the initial assessment considers both dimensions together. This matters most when the long-term prosthodontic goal — an implant-supported crown, a full-arch rehabilitation, a fixed bridge — needs to actively shape the surgical and therapeutic approach from the outset.

His dual registration is particularly relevant for patients presenting with:

- Compromised periodontal status requiring implant-supported restorations, where gum and bone health must be addressed alongside implant planning
- Full-mouth rehabilitation cases with a history of active gum disease, requiring careful sequencing of periodontal and restorative care
- Cases where the intended prosthodontic outcome must guide the periodontal surgical approach, rather than the two being planned separately

For referring practitioners, Dr Hinckfuss offers a single point of contact spanning both specialties, reducing the need for patients to navigate multiple referral pathways and allowing more cohesive treatment planning across complex cases.

All specialist credentials held by Dr Hinckfuss are independently verifiable through the Australian Health Practitioner Regulation Agency (AHPRA) public register, which patients and referring practitioners are encouraged to consult for confirmation of specialist registration status.
